

African natural products + synthetic antimalarials

396 ANPs + 454 synthetics

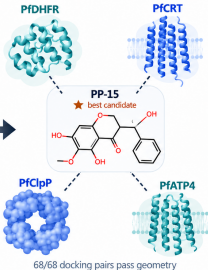

65,856
unique molecules

19,913
synthesizable leads

17-member
cohort (Set C)

4 malaria parasite targets

Computational docking (polypharmacology)

Computational hypotheses only — no biological activity claimed

Resistance-resilience output

Per-target mutation profile and
chemical space prioritization

A* 7 | mutation-resilient

B 4 | intermediate
resilience

C 6 | lower resilience

Top 5: PP-15, PP-05, PP-06, PP-11, PP-13

4/4 targets
+ A* class
